Seeking a web developer position where I can apply my attention to detail, teamwork skills, and advanced knowledge in the user side as well as the server side of JavaScript to create an efficient and enjoyable experience for any web user.

Technologies and Tools

React, Next.JS, Bootstrap, jQuery, Express.JS, Tailwind CSS, CSS, HTML, JavaScript, MySQL, Handlebars

Projects

Pokedex Website / https://stamperm.github.io/velocirapt-vars--pokedex/
January 2023

- Worked with a team to build a Pokémon pokedex using HTML, JavaScript, and CSS that generates a list of each character and its statistics within the game.
- Built and integrated a search function to query for a specific character by name.
- Created an indexed list of characters that can be individually picked and added to a team.
- Reached a userbase of 40 users.

Planet Facts Site / https://waustin45.github.io/planet-facts-site/
November 2022

- Used React.js to create a site that gives facts and information about each planet.

Auction Plaza / https://auction-site-gt.herokuapp.com
February 2023

- Lead a team to build an Auction site using HTML, Handlebars, JavaScript, Tailwind CSS and Express.
- Using Express.js with MySQL, I built a functioning backend that stored user information as well as any product listing that user posted.
- Using Sequelize I created a homepage sorting feature that sorted the product listings by ascending/descending prices and alphabetical order.

Education

Georgia Southern University
May 2020

- Bachelor of Business Administration in Finance

Georgia Institute of Technology
March 2023

- Fullstack Web Development Bootcamp
